

Analyzing and Identifying Jobs

Chapter 7 — HR Complete Notes

English Headings | Roman Urdu Explanation | Examples

Exam Preparation Guide

Subject:	Human Resource Management
Chapter:	7 — Analyzing and Identifying Jobs
Language:	English + Roman Urdu
Purpose:	Paper ki tayari ke liye complete notes

1. Job Analysis — Definition & Importance

English Definition:

Job Analysis is a systematic way to gather and analyze information about the content and human requirements of jobs, and the context in which jobs are performed. It is the most basic building block of HR management.

Roman Urdu Mein Matlab:

Job Analysis ek systematic tareeqa hai jis se yeh pata kiya jata hai ke kisi job mein kya kaam hota hai, us kaam ke liye kya qualities chahiye, aur woh kaam kis mahool mein hota hai. Yeh HR management ki sabse basic cheez hai.

Job Analysis Mein Kya Information Iktha Ki Jati Hai:

- Work activities and behaviors — Kya kaam karna hoga
- Interactions with others — Doosron se kaise milna hoga
- Performance standards — Kaam ka standard kya hoga
- Financial and budgeting impact — Paisay aur budget par asar
- Machines and equipment used — Kaunsi machines istemaal hongy
- Working conditions — Kaam karne ka mahool kaisa hoga
- Supervision given and received — Supervision deni ya leni hai
- Knowledge, skills, and abilities needed — Kya ilm aur skills chahiye

Example: Ek HR manager ne office mein ek 'Data Entry Operator' ki job ka analysis kiya. Unhone paya ke is job mein computer typing, 8 ghante baithna, accuracy ki zaroorat, aur supervisor ko daily report dena shamil hai. — Yeh job analysis hai.

Exam Tip: Job Analysis = Information gather karna job ke baare mein. Yeh HR ka sabse pehla aur zaroori step hai.

2. What Is a Job? — Job vs Position

English Definitions:

A Job is a grouping of similar positions having common tasks, duties, and responsibilities. A Position is a job performed by one person.

Roman Urdu Mein Farq:

Term	English Meaning	Roman Urdu Matlab
Job	Grouping of similar positions with same tasks	Milte julte kamon ka group — ek qisam ka kaam
Position	A job performed by one specific person	Ek kaam jo ek specific banda karta hai

Example: Ek office mein 2 log word processing karte hain. Toh: Positions = 2 (kyunke 2 alag log hain) Job = 1 (kyunke dono ka kaam ek hi hai — Word Processing Operator) Yaani: Job ek hoti hai, Positions alag alag ho sakti hain.

Exam Tip: Job = category of work | Position = ek banda ek kaam. Agar 5 accountants hain — 5 positions hain, lekin 1 job hai (Accountant).

3. Job Analysis vs Job Design — Difference

English Concept:

Job Design is broader in nature. Its primary purpose is meshing productivity needs with human needs. Job Analysis, on the other hand, focuses on gathering and analyzing existing job information.

Roman Urdu Mein Farq:

	Job Analysis	Job Design
Kya hai?	Job ke baare mein info gather karna	Job ko is tarah design karna ke productive bhi ho aur human
Focus	Information collection	Productivity + Employee needs
Nature	Narrow — specific info	Broad — poori job ka structure
Purpose	Existing job samajhna	Nayi ya behtar job banana

Example — Job Analysis: HR manager ne pata kiya ke 'Sales Officer' ko daily 10 calls karni hain, Excel use karna hai, aur team se milna hai. Example — Job Design: HR ne decide kiya ke Sales Officer ko flexible hours milenge aur work from home bhi allowed hoga taake productivity badhay. — Yeh Job Design hai.

4. Work Analysis

English Definition:

Work Analysis means studying the workflow, activities, context, and output of a job. It looks at HOW work is done, not just WHAT work is done.

Roman Urdu Mein Matlab:

Work Analysis mein yeh dekha jata hai ke kaam kaise hota hai — kaam ka flow kya hai, kya activities hoti hain, kis mahool mein hoti hain, aur kya output aata hai.

Example: Ek factory mein HR team ne dekha ke assembly line par kaam kaise hota hai, har worker kya karta hai, kitna waqt lagta hai, aur kya output produce hoti hai. Yeh Work Analysis hai.

5. Task, Duty, and Job Responsibilities

English Definitions:

Term	English Definition	Roman Urdu Matlab
Task	A distinct, identifiable work activity composed of a single action.	Ek chota aur clearly identified kaam — jaise ek haath chalna
Duty	A larger work segment composed of several tasks performed by an individual.	Kuch tasks milke ek duty individual — ek banda karta hai
Job Responsibilities	Obligations to perform certain tasks and duties.	Woh zimmedarian jo job mein di gayi hain — karna hi parega

Example — Teacher ki job se samjho: Task = Board par likhna (ek chota kaam) Duty = Lesson padhana (kai tasks — likhna, samjhana, sawaal karna — milke duty banti hai) Job Responsibility = Students ko pass karwana (poori zimmedari jo job mein di gayi hai)

Exam Tip: Task (chota) -> Duty (kuch tasks milke) -> Responsibility (poori zimmedari). Yeh ek hierarchy hai — chhoti cheez se badi cheez ki taraf.

6. Competencies

English Definition:

Competencies are basic characteristics that can be linked to enhanced performance by individuals or teams. They go beyond just skills — they include knowledge, behaviors, and attitudes that make a person perform better.

Roman Urdu Mein Matlab:

Competencies woh bunyadi characteristics hain jo kisi bande ya team ki performance ko behtar banati hain. Sirf skills nahi — balke knowledge, behavior aur attitude sab milke competency banti hai.

Competencies Ki Misalain:

- Communication skills — Achi tarah baat karna aur samjhana
- Problem solving — Masail hal karna
- Teamwork — Team ke saath milkar kaam karna
- Leadership — Doosron ko guide karna
- Time management — Waqt ka sahih istemaal karna

Example: Ek bank manager ki competencies: Customer service, decision making, financial knowledge, aur team leadership. Sirf degree nahi — yeh sab qualities mil ke use 'competent' banati hain.

Exam Tip: Competency = Skills + Knowledge + Behavior + Attitude. Yeh woh cheez hai jo ek average employee ko outstanding banati hai.

Quick Revision Table — Tamam Topics Ek Nazar Mein

Topic	Key Point (English)	Roman Urdu Mein
Job Analysis	Systematic info gathering about a job	Job ke baare mein info iktha karna
Job	Grouping of similar positions	Milte julte positions ka group
Position	Job done by one person	Ek banda ek kaam — yeh position hai
Job Analysis vs Design	Analysis = info; Design = structure	Analysis = pata karna; Design = banana
Work Analysis	Study workflow, activities, output	Kaam ka flow aur output dekhna
Task	Smallest work unit	Sabse chota kaam
Duty	Several tasks combined	Kai tasks milke duty banti hai
Job Responsibility	Obligation to do tasks/duties	Job mein di gayi zimmedari
Competency	Characteristics for better performance	Qualities jo performance behtar karti hain

Best of Luck! Chapter 7 ke tamam important concepts cover ho gaye hain. Examples yaad rakho — paper mein definitions ke saath examples bhi likhna. Best of luck!
